

Case Study

SAP HANA Mixed Architecture Scenario

Non-SAP Data Integration With Suite On HANA (without Enterprise HANA)

Industry
Pharmaceuticals

Location
US & Ireland

Revenue
~ 3.5 Billion USD

Scenario

- Customer had SAP ECC (Suite on HANA), CRM and BW on HANA, but no HANA EE License

- Non-SAP data was modeled in BW and subsequently consumed by the HANA Database supporting Suite on HANA through Smart Data Access (SDA) - as licensing prohibited direct data loading of Non SAP data into the HANA Database of Suite on HANA

- HANA views were finally built on top of integrated data on Suite on HANA and consumed by BOBJ frontend tools
